

Excel Basics Assignment

1. Explain the difference between Relative, Absolute and Mixed Cell Referencing. You have the following dataset:

Answer - Relative cell referencing - When a formula containing a relative reference (e.g., A1) is copied to another cell, the reference changes relative to its new position.

Absolute Cell Referencing - This type of reference remains constant no matter where it is copied. A dollar sign (\$A) is used before both the column and row.

Mixed Cell Referencing - This is a hybrid approach where either the column or the row is absolute, but not both (e.g., \$A1).

2. Write a formula to calculate the total sales of Car and Bicycle only only.

Answer - The formula to calculate the total sales of the Car and Bicycle is
Total sales = 50000 + 10500 = 510500

3. Using the data below, write a formula to calculate the average sales of items priced above 100 but less than 300:

Answer - The formula to calculate the average sales is $1200 + 1500 / 2$, and the average
The value is 1350.

4. Count how many customer names are recorded.

Answer - 50 customers

5. Calculate the Total Sales for each row using a formula.

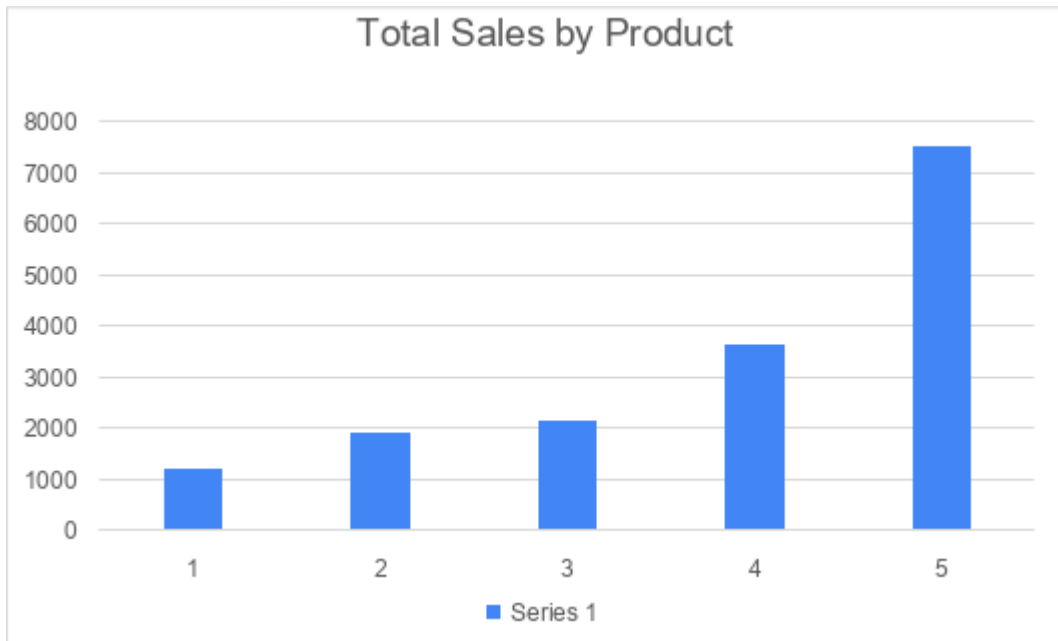

Answer - Total sales = Units x Unit cost
Total sales = 50 x 10 = 500
Total sales =SUM(H2:H51)
16543

6. Calculate the total sales of Notebooks in the North region only.

Answer - =SUM(H2+H14+H22+H30+H50) = 2900

7. Create a column chart showing total sales by product.

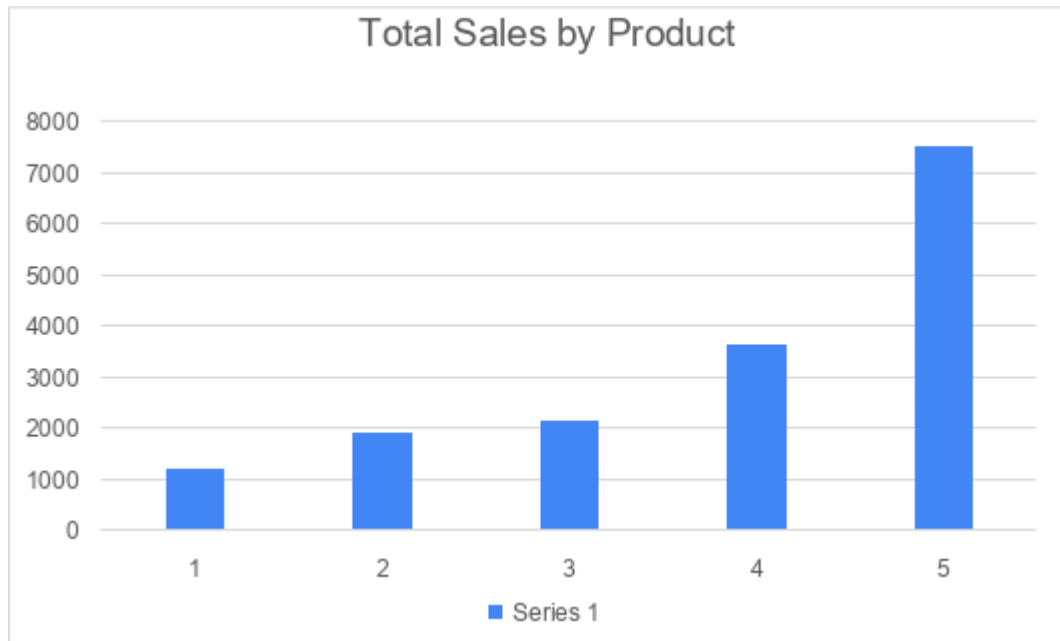

Excel Basics Assignment

8. Insert a line chart showing daily sales trends.

Row Labels	Sum of Total Price
Pencil	1235
Eraser	1928
Pen	2180
Marker	3650
Notebook	7550
Grand Total	16543
